“Our ideals, laws and customs should be based on the proposition that each generation, in turn, becomes the custodian rather than the absolute owner of our resources and each generation has the obligation to pass this inheritance on to the future.”

— Charles A. Lindbergh

Acknowledgments

This plan was made possible by the Pima County Board of Supervisors and the contributions of many dedicated employees representing a variety of disciplines and Departments, including:

Community and Economic Development
Community Development and Neighborhood Conservation
   Community Services
County Administrator’s Office
Cultural Resources & Historic Preservation Office
Department of Transportation
   Development Services
   Environmental Quality
   Facilities Management
   Fleet Services
   Graphic Services
   Institutional Health
Natural Resources, Parks and Recreation
   Neighborhood Reinvestment
Pima County Public Library
Pima County Sheriff’s Department
   Procurement
   Public Works
Real Property Services
Regional Flood Control District
Regional Wastewater Reclamation Department
Tourism and Economic Development

Special thanks also to the Pima County residents and organizations who critiqued and commented on the draft during the public review process. Their comments have further enhanced the County’s strategic path to operational sustainability.
Sustainable Action Plan for County Operations

    Pima County’s Sustainability Initiatives Resolution No. 2007-84................................. 37
    Quarterly Progress Report Template for County Departments ....................... 38
This plan represents a systematic approach to integrating the goals of sustainability into virtually all facets of the way Pima County government operates—from the cars we drive, to the energy and water we consume, to the construction of our buildings, to the products we purchase, to the way in which we view and handle our “used” materials.

For the last several months, we have asked employees throughout our organization to examine our existing sustainability “success stories,” and then identify ways in which the County can build upon, and enhance, our sustainable practices. The Board of Supervisors provided the inspiration and direction for this planning effort with their unanimous adoption of Resolution No. 2007-84 on May 1, 2007. The resolution establishes a far-reaching set of sustainability initiatives, many of which set specific goals for the way Pima County departments operate—like shifting at least half of our fleet vehicles to more environmentally-friendly fuels by 2010; powering our facilities with at least 15% renewable energy by 2025; and building all new County-funded facilities to meet the U.S. Green Building Council’s LEED Silver standards.

The outcome is this “Sustainable Action Plan for County Operations,” which recommends specific actions for enhancing County performance in the following seven areas: Water Conservation and Management, Green Building, Renewable Energy and Energy Efficiency, Alternative Fuel Vehicles, Green Purchasing, Waste Reduction, and Land Conservation and Management. Each chapter of the plan is devoted to a separate topic area, and includes the following key components:

**Sustainability Goals**
The goals describe the specific targets and aspirations contained in Resolution No. 2007-84 for each topic area.

**Guiding Principles**
These principles provide a policy framework for implementing the sustainability goals. New activities and proposals will be measured by their ability to achieve the guiding principles and sustainability goals.

**Five-Year Action Plan**
The action plan recommends specific activities and programs designed to achieve the goals and principles, establishes an implementation schedule, and identifies the lead and supporting departments responsible for overseeing the activities.¹ The action items appear in chronological order according to their implementation schedule, which is based on fiscal year quarters.²

**Success Indicators**
The success indicators will provide feedback about the County’s progress toward greater operational sustainability. The indicators will be monitored, with annual reports presented to the Board of Supervisors and the public.

**Current Sustainability Successes**
This section presents a “snapshot” of existing County programs that contribute to sustainability. Employees on the Sustainable Action Teams (“S-Teams”) conducted a comprehensive inventory of current programs during the initial phase of this planning effort.

The Sustainable Action Plan for County Operations is intended to be an adaptive plan that will be responsive to new ideas, technologies, partnerships, and shifts in available resources, with the goal of every new adaptation taking us down an even BETTER and MORE SUSTAINABLE path. Major updates will be conducted every five years, with smaller adjustments occurring as needed, based on the results of an ongoing monitoring and evaluation program.

¹ Should a substantive conflict arise between two activities, it will be resolved in favor of the activity that provides the greatest advancement of the County’s sustainability initiatives.

² A County fiscal year runs from July 1 through June 30.
Specific Results to be Achieved

Full implementation of the plan will achieve numerous results, including:

- Creating a “greener” and more healthful built environment;
- Increasing water and energy efficiency and energy independence;
- Improving air quality and reducing greenhouse gas emissions;
- Conserving irreplaceable natural and cultural resources;
- Encouraging the growth of markets for environmental products and services;
- Increasing employee participation and decision-making in workplace sustainability; and
- Reducing County expenses over the long term.

To encourage the full engagement of all employees in these successes, Pima County will offer sustainability training as part of new employee orientations, appoint “green purchasing” representatives and eco-champions for each department, and develop a program to recognize employees who contribute practical and cost-effective suggestions for improving sustainability.

We also look forward to forging new partnerships and relationships in the community. By working with other public agencies, educational institutions, businesses and organizations in the pursuit of many of our sustainability goals, we hope to multiply our successes, develop new innovations, and incorporate the most effective sustainable practices into our day-to-day operations.

The Action Planning Process

The following flowchart summarizes key steps in the Sustainable Action Planning process.
Alternative-Fuel Vehicles

Resolution No. 2007-84
Sustainability Goals

- Use alternative fuels in 25% of fleet vehicles or a minimum of 100 vehicles (excluding patrol cars) by 2008; and
- Increase percentage of fleet vehicles using alternative fuels to 30% by 2009 and 50% by 2010.

Guiding Principles

THE COUNTY WILL:

- Purchase and use greener vehicles;
- Use greener, cleaner burning fuels;
- Increase the efficiency of the fleet regardless of the fuel used;
- Reduce the vehicle miles traveled (VMT) by the fleet;
- Allow employees to go to different work sites from home and return (minimize trips to downtown or other office locations);
- Encourage alternatives to driving for short work trips;
- Educate County employees about green fleets and the impact of vehicles on the environment and the community;
- Expand incentives to encourage employees to use alternative forms of transportation to travel to and from work;
- Clearly mark County vehicles so they can be easily identified by the public and in doing so, reduce the potential for unofficial use resulting in more vehicle miles traveled; and
- Identify County vehicles that use alternative fuels.

($) = Requires substantial new funding or resources to implement.
Highlights of Current Successes

Pima County already:

- Manages a growing inventory of alternative-fuel vehicles, having purchased or ordered 73 hybrid or E85 vehicles to date, in furtherance of the County's sustainability initiatives.
- Provides education to County employees on fuel conservation as part of the Driver Energy Conservation Awareness Training course.
- Encourages employees to reduce work-related trips through participation in the Pima County Travel Reduction Program, and by offering special programs such as subsidized bus passes, subsidized carpool parking, the provision of bicycle racks and lockers at some facilities, and the Guaranteed Ride Home Program. A 2007 survey of County employees indicated that 28.5% of those responding used alternative modes of travel during their workday commute.

Success Indicators

1. Number of environmentally-friendly fleet vehicles
   
   Target:
   
   • 100 vehicles, or 25% of vehicle fleet, by 2008; 30% of the fleet by 2009; and 50% of the fleet by 2010 (excluding Sheriff’s vehicles)

2. Education of County employees
   
   Targets:
   
   • 100% of new employees using County vehicles trained on how to drive more efficiently and reduce vehicle miles traveled
   • 100% of employees enrolled in Defensive Driving Class trained on how to drive more efficiently
   • Articles promoting travel reduction, alternative-fuel vehicles and fuel-efficient driving techniques published in employee newsletter and on County-websites

3. Participation of County employees in trip reduction programs
   
   Baseline:
   
   Historical participation rate of 25%

   Target:
   
   Achieve a minimum 30% participation rate by FY 2010

Alternative-Fuel Vehicles
Green Building

Resolution No. 2007-84
Sustainability Goals

• Adopt and promote the use of LEED (Leadership in Energy and Environmental Design) Silver principles in new and existing buildings;

• Build all new occupied County buildings designed after July 1, 2007, including additions over 5,000 square feet, to achieve a minimum of LEED Silver certification level;

• Construct one medium-size building with a net zero energy consumption; and

• Apply LEED principles to all buildings funded through County bonds, regardless of jurisdiction

Guiding Principles

THE COUNTY WILL:

DESIGN AND CONSTRUCTION
Design, construct and operate buildings to:

• minimize natural resource consumption through the use of renewable resources;
• achieve maximum efficiencies in energy use and energy performance;
• minimize emissions and negative indoor and outdoor air quality impacts;
• reduce the amount of water used by occupants and mechanical systems, and maximize on-site water harvesting, re-use, and recharge;
• reduce or eliminate construction waste, solid waste, and liquid effluence;
• maximize the reuse and recycling of materials;
• avoid or minimize negative impacts on site ecosystems, the Conservation Land System, designated riparian habitat and cultural resources;
• actively protect, enhance and restore wildlife habitat and landscape connectivity;
• maximize the quality of the indoor environment for the comfort, health, safety, and productivity of occupants and visitors;
• preserve natural dark sky conditions, to the maximum extent possible, through the selection of outdoor lighting fixtures that reduce sky glow impacts;
• maximize use of existing buildings, thereby conserving resources and the embodied energy from prior construction; and
• encourage the rehabilitation and adaptive use of historic buildings.

PROJECT MANAGEMENT AND CONTRACTING

• Support and encourage education in sustainable design and LEED principles for employees and residents.
• Use a procurement selection process that actively seeks firms with experience in designing LEED-certified structures, the integrated design process, and building commissioning.
• Encourage innovation in building technologies, materials and methods to meet LEED credits and respond to the Sonoran Desert environment.
• When warranted by the scope and complexity of the project, employ third-party project managers to monitor construction to ensure LEED principles are followed.

Guiding Principles continued on p. 13

### Guiding Principles, continued

**FINANCING**
- Explore all utility credits, grants and other incentives for financing green building construction and maintenance.
- Explore public/private financing options.

**CONSTRUCTION MATERIALS AND RECYCLING**
- Consider long-term costs and benefits of material purchases by employing life-cycle cost analysis.
- Support and encourage the formation of local recycling industries and markets.
- Incorporate appropriate facilities for reuse and recycling of materials in all Pima County buildings.
- Provide employee education and incentives for recycling.

**CONTRACTOR OUTREACH AND EDUCATION**
- Convey LEED principles and requirements to the contracting community.
- Provide special training opportunities for women and minority-owned business enterprises and other contractors.

**STAKEHOLDER PARTICIPATION**
- Involve stakeholders in the sustainable design and decision-making process through public information sessions, outreach to affected parties and neighborhood groups, other jurisdictions, and community educational forums.

**POST-OCCUPANCY MAINTENANCE & EVALUATION**
- Utilize building commissioning and occupant evaluations to guide building maintenance expenditures.
- Maintain all LEED-certified buildings as closely as possible to the original specifications unless advances in technology dictate revisions.
- Program funds to properly maintain the building by using the cost savings achieved through the application of “green” technologies so that the building is a model of both fiscal and environmental sustainability.

---

### Highlights of Current Successes

**Pima County already:**
- Designs new buildings to achieve the U.S. Green Building Council’s nationally-recognized LEED Silver principles. The first two such buildings—the Jackson Employment Center in South Tucson and the Catalina Community Center in Catalina—are slated to open in 2009.
- Administers its own “Regional Residential Green Building Rating System”—the first of its kind in Southern Arizona—and plans to unveil a similar green building rating system for commercial structures.
- Pursues green building practices in its “I’m Home” program by planning for the replacement of substandard housing units with homes that feature Energy Star-rated equipment and appliances.
- Provides building safety personnel with LEED accreditation training to facilitate implementation of its green building standards.
- Rehabilitates historic buildings for productive, continued uses, such as Robles Ranch and the Augua Caliente Park facilities.
Renewable Energy and Conservation

Resolution No. 2007-84
Sustainability Goals

• 15% of energy used by all County facilities shall come from renewable resources by 2025; and

• Maximize the use of methane as a renewable energy source in wastewater and landfill operations in order to offset non-renewable energy sources.

Guiding Principles

THE COUNTY WILL:

• Support and actively promote the development of renewable energy resources and the reduction of greenhouse gas emissions;

• Strive for innovative ways to procure renewable energy for County facilities, including the use of power purchase agreements;

• Work with public and private partners to identify suitable sites for renewable energy facilities;

• Conduct a cost-benefit analysis of various renewable energy resources to determine the most beneficial and cost-effective energy source for a particular site given its location, features, land use, and infrastructure requirements;

• Explore opportunities for the mining of methane as part of landfill closure procedures;

• Systematically upgrade its facilities with energy-conserving equipment and features to reduce its overall energy consumption;

• Explore opportunities to coordinate and cooperate with other large power users in order to maximize the use of renewable energy and expand the market for renewable energy alternatives in the region;

• Identify grant opportunities and special funding sources to help offset the cost of providing renewable energy to County facilities;

• Track energy consumption for each County facility on a regular and ongoing basis, and use the data to evaluate and make improvements to the energy efficiency of each facility;

• Employ benchmarking principles that establish best management practices based on lessons learned from other entities so that the County can continue to economize its energy use;

• Educate employees about ways they can increase energy efficiency in the workplace; and

• Recognize employees who identify new energy-conserving programs that are both practical and cost-effective.

### 3. INCREASE USE OF RENEWABLE ENERGY

a. Emphasize on-site renewable energy credits in County LEED buildings

b. Solicit proposals for Renewable Energy Power Purchase Agreements (PPAs)

c. Explore developing cooperative RFPs with large energy users to take advantage of economies of scale in the purchase of renewable energy

d. Establish renewable energy taskforce to review emerging technologies and assess their value toward meeting the 15% goal

e. Evaluate potential methane gas capture projects at Pima County landfills, especially Tangerine, to generate electricity and reduce greenhouse gas emissions

($) = Requires substantial new funding or resources to implement.
## Success Indicators

</tr>
</thead>
<tbody>
<tr>
<td>1. County expenditures for energy</td>
<td>- Energy expenditures for FY 2006/2007 (Approximately $9.4 million for electricity and $4.4 million for gas)</td>
<td>- No increase in energy expenditures over baseline year (i.e. through energy savings, neutralize the effect of future rate increases)</td>
</tr>
<tr>
<td>2. Energy consumed by county buildings and facilities</td>
<td>- Establish baseline electrical use in FY 2008/2009</td>
<td>- To be determined based on energy efficiency goals established in Action (2h)</td>
</tr>
<tr>
<td>3. LEED Silver energy credits in County projects</td>
<td>- Projects designed after June 30, 2008</td>
<td>- All new buildings obtain a minimum of 65% of available energy credits in LEED-New Construction (NC)</td>
</tr>
<tr>
<td>4. Renewable energy use in county buildings, parks, and other facilities.</td>
<td>- Establish baseline in FY 2008/2009</td>
<td>- Provide 5% renewable energy for county facilities by 2012; 10% renewable by 2017; 15% by 2025</td>
</tr>
<tr>
<td>5. Methane as an energy source</td>
<td>- Methane use in FY 2006/2007 (169.84 million cubic feet)</td>
<td>- Increase use by FY 2010/2011</td>
</tr>
</tbody>
</table>

### On the path to progress ...

#### Highlights of Current Successes

**Pima County already:**
- Captures and uses methane gas, a renewable energy source, at the Ina Road and Roger Road Wastewater Treatment Plants, which reduces the County’s consumption of natural gas. In addition, County staff are conducting an inventory of County-owned parcels to identify additional sites for renewable energy facilities.
- Continuously strives to upgrade existing facilities with energy-conserving equipment.
- Uses a centralized energy management system to monitor heating and cooling systems in downtown buildings to ensure peak operating efficiency and quick trouble-shooting.
Green Purchasing

Resolution No. 2007-84
Sustainability Goals

• Apply a green purchasing emphasis to all County facilities.

Guiding Principles

THE COUNTY WILL:

• Encourage purchases that provide a positive impact on the environment, economy, and community;
• Seek out the best, overall product values by using cost-benefit and life-cycle cost analyses;
• Support the identification, evaluation, use and measurement of innovative, environmentally-friendly products, services and practices;
• Develop specifications for products and services that beneficially impact the environment through such things as: increased energy and water efficiency; reduced waste generation; reduced consumption of non-renewable natural resources; improved public health; and increased durability and economy;
• Purchase equipment and products that meet or exceed Energy Star efficiency standards;
• Consider purchasing products that optimize the use of recycled materials;
• Consider the energy required to produce, manufacture, and transport the product to market and, if all other product attributes are equal, give preference to those products with the lowest overall energy use (i.e., “low-embodied energy products”);
• Eliminate or minimize the use of toxic or potentially toxic or hazardous materials, including those used in the manufacture or subsequent use of certain products;
• Consider the ultimate disposition of purchased materials and, when feasible, acquire products that can be recycled or re-used;
• Encourage employees to use surplus equipment or adaptively re-use existing equipment when the equipment can safely and efficiently satisfy the objectives of the department;
• Encourage suppliers to use appropriate green supplies and environmentally-preferable products;
• Encourage employee awareness regarding opportunities to make “green-friendly” purchasing decisions; and
• Apply the County’s living wage policies and procedures to eligible contracts to advance economic growth and opportunities for individuals, families, and the community.

## Highlights of Current Successes

**Pima County already:**
- Encourages employees to purchase environmentally-friendly office supplies using a custom website, which provides information about whether a product is made of compostable or recycled materials, meets “Green Seal” or “Energy Star” standards, or is considered an “Environmentally Preferable Product” by the federal government.
- Requires janitorial companies that service County sites to use environmentally-preferable cleaning products.
- Promotes the re-use of office furniture, and the health and comfort of employees, by buying re-usable components that create ergonomically-correct work spaces.
- Installs environmentally-friendly floor treatments by replacing traditional carpet rolls with carpet tiles that have a longer life and provide better indoor air quality. The County also uses linoleum and rubber flooring made of natural and renewable materials.
- Buys digital technologies to reduce paper consumption, printing costs, landfill waste and office storage space. For example, the Sheriff’s Department recently issued digital cameras to deputies and forensic technicians as a replacement for the old 35-millimeter cameras, eliminating the need for film and the use and disposal of processing chemicals.
Land Conservation and Management

Resolution No. 2007-84
Sustainability Goals

- Support sustainable development and the continual emphasis on sustaining a livable community.

Guiding Document
- Sonoran Desert Conservation Plan

Guiding Principles

THE COUNTY WILL:

LAND AND FACILITY ACQUISITION
- Acquire land and facilities that are best suited for the intended use and will most effectively achieve the goals of the Sonoran Desert Conservation Plan; and
- Acquire or set aside County lands for conservation to offset unavoidable County operational impacts to the Conservation Lands System, designated riparian habitat, and cultural resources.

FACILITY AND INFRASTRUCTURE SITING
- Evaluate and track the siting of new facilities and infrastructure to avoid or minimize impacts to the Conservation Lands System, designated riparian habitat, floodplains and cultural resources.

MANAGEMENT OF LAND, FACILITIES, AND INFRASTRUCTURE
- Monitor and manage its land, facilities, and infrastructure to achieve the goals of the Sonoran Desert Conservation Plan;
- Manage lands purchased for the conservation of biological and cultural resources to ensure the integrity, diversity and long-term viability of the resources;
- Monitor and control invasive species to minimize impacts on natural ecological systems, protect public safety, and maintain economic viability;
- Assess the impacts on natural and cultural resources prior to the decision to modify or dispose of any County land, facilities, or infrastructure;
- Implement informational and educational programs to improve cultural resources and environmental literacy in the County; and
- Encourage smart growth decisions to promote the most efficient use of infrastructure.

---

### Highlights of Current Successes

**Pima County already:**
- Owns and manages over 150,000 acres for conservation, including ranches, mountain parks and preserves.
- Acquires lands to further the goals of the national-renowned Sonoran Desert Conservation Plan using voter-approved bond funds. These acquisitions conserve wildlife habitat, protect cultural and historic resources, expand recreational opportunities, and protect a ranching heritage that is unique to the West.
- Applies to the Regional Transportation Authority’s (RTA) Wildlife Linkage program for funding to reduce the impacts of roadways on wildlife movement.
- Partners with public agencies and non-profit organizations to reintroduce native wildlife to their natural habitats, including the reintroduction of spade-foot toads to the Swan Riparian Area, native fish to the Bingham Cienega Preserve, and burrowing owls to the Raul M. Grijalva Canoa Ranch.
- Applies special design guidelines to the construction of roads in environmentally-sensitive areas in order to avoid or mitigate impacts to the region’s natural and cultural resources.
- Applies the Conservation Lands System (CLS) policies of the Pima County Comprehensive Plan to direct infrastructure investments to areas that are most suited for new growth, and to guide conservation efforts within the CLS.
- Applies riparian habitat guidelines to new development projects.
Waste Reduction

Resolution No. 2007-84
Sustainability Goals

• Apply a waste reduction emphasis to all County facilities.

Guiding Principles

THE COUNTY WILL:

• Employ the Integrated Waste Management (IWM) hierarchy as its waste reduction ethic. IWM is a hierarchy of progressive steps emphasizing waste prevention as the first step, and disposal in a landfill as the final, and least desirable, alternative;

• Regard and treat waste as a valuable commodity, rather than garbage, and seek innovative, groundbreaking waste reduction programs that become a model for other communities;

• Employ IWM in its advanced planning for all County operations, and make waste reduction an imperative throughout the life cycle of the operation;

• Include dedicated and secure space for recycling bins in all new County facilities, as well as encourage other forms of waste reduction, such as the use of reused or recycled materials in building construction. When opportunities for waste reduction and recycling exist that are not in the LEED design standards for a project, they shall be reviewed and implemented whenever feasible;

• Design and operate landfill programs to facilitate waste reduction by maximizing on-site recycling and reuse/exchange opportunities;

• Make waste reduction an integral part of every County employee’s job. Resources and mechanisms will be created or strengthened to better communicate to employees waste reduction opportunities;

Guiding Principles continued on p. 27

<tr>
<th>2. Green events at County facilities</th>
<th>Target:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• 100% of special events to implement an Integrated Waste Management Plan</td>
<td></td>
</tr>
</tbody>
</table>

### Highlights of Current Successes

**Pima County already:**

- Actively recycles paper, newspaper, and cardboard in 10 downtown facilities, saving an estimated 12,000 trees, 2.8 million gallons of water, 335,000 kilowatt hours of energy, and nearly $28,000 in disposal costs from October 2007 through May 2008.
- Manages a surplus property program that recycled more than 6,000 pieces of furniture and equipment over a three-year period in cooperation with various County Departments and 13 non-profit organizations.
- Offers surplus vehicles and machines to the public via an internet auction. Since going on-line in October 2005, 318 vehicles and machines have been sold.
- Finds new homes for more than 350,000 used library books a year through the Friends of the Pima County Public Library, a non-profit organization that raises funds for special programs that are not covered in the library’s annual budget.
- Reduces construction waste by: paving roads with concrete made from recycled tires, landscaping with salvaged native plants, and applying Environmentally Sensitive Roadway Design Guidelines to reduce the size of roadway “footprints.”
- Recycles specialty materials such as scrap metal, ammunition, and oil.
- Transforms green waste into landfill cover that is used daily by the Tangerine Landfill.
Resolution No. 2007-84
Sustainability Goals

- Cut water use in all County facilities by 15% by 2025;¹
- Double the number of County parks served by reclaimed water by 2018, subject to voter approval of bond funds to extend reclaimed water lines; and
- Maximize County water resource assets including groundwater rights, surface rights and production and use of effluent to sustain and protect the natural environment.

¹The Water Conservation S-Team recommends that this goal be interpreted in the following manner: that the County shall cut water use in existing county facilities by 15% by 2025, and new County facilities shall adhere to the Guiding Principles set forth in this document, which include the requirement that new facilities emphasize water conservation and use state-of-the-art fixtures to maximize LEED Silver water conservation credits.

Guiding Principles

COUNTY BUILDINGS

- Emphasize water conservation in the design of all new County facilities and use state-of-the-art fixtures to maximize LEED Silver water conservation credits;
- Maximize the use of greywater for restroom facilities, landscape irrigation, and other uses as may be appropriate, by installing greywater piping and on-site greywater treatment systems in new facilities, when practicable;
- Employ a cost-benefit analysis to determine the type of water fixtures and systems to install in existing County buildings; whenever practicable, replace outdated or damaged water fixtures with state-of-the-art, water-conserving fixtures; and
- Construct wastewater facilities to anticipate and accommodate emerging water conservation trends and technologies, whenever practicable.

COUNTY LANDSCAPING & PARKS

- Reduce to the maximum extent practicable, the amount of potable, non-potable and reclaimed water used for landscape irrigation at County facilities and along public roadways;
- Require that ornamental landscaping use appropriate, native and drought-tolerant plants where feasible and meet or exceed the requirements of the County’s Native Plant Preservation Ordinance;
- Explore additional opportunities to extend reclaimed water lines to new parks by identifying creative funding mechanisms that would augment the use of any voter-approved public bond monies;
- Plant species that are indigenous to the local area when landscaping next to natural open space or riparian corridors, where feasible;
- Require that turf only be used for functional landscapes, such as play areas and ball fields, when it is determined to be the most suitable material after considering the type and amount of use it will receive, its maintenance needs, life-cycle costs, and water and energy consumption. Turf shall not be used for purely aesthetic purposes;
- Use water-conserving practices and technologies including...
rainwater harvesting, “smart” irrigation timers and controls, drip irrigation, flow meters, master valves, water audits, and hydrozoning.

EMPLOYEE AND CONTRACTOR EDUCATION

• Encourage a “maintenance and management” culture through training opportunities and recognition programs for employees and contractors; and

• Incorporate a public education component in major County landscape projects where feasible, such as native plant demonstration gardens and rainwater harvesting techniques.

TRACKING AND MONITORING

• Ensure that water consumption and water utility expenditures be separately tracked for each County facility on a regular and ongoing basis, and the data shall be used to evaluate, make improvements, and track the water efficiency of each facility;

• When preparing cost-benefit analyses, and tracking and monitoring water conservation programs, recognize both the apparent benefits and “hidden savings” that occur, including lower utility costs, reduced maintenance needs, reduced water run-off and, in some cases, reduced road damage; and

• Require the contractor to perform water audits on landscape and irrigation installations to show that they have been installed per specifications and are working as specified. If the audit identifies deficiencies, the contractor shall be required to correct them.

PROTECTION & PERPETUATION OF NATURAL RESOURCES

• Use pervious surface materials on roads and parking lots, when practical, to increase groundwater recharge opportunities;

• Maintain the ability of the Santa Cruz River to support riparian and aquatic life by improving water quality, especially through nutrient reduction, and working with partners to maintain base flows;

• Integrate wastewater reclamation and water rights, where practicable, with multi-purpose goals such as recharge, riparian restoration, habitat protection, wildlife viewing, use of interpretive trails and environmental education and research;

• Emphasize the maintenance and protection of riparian areas in a natural state and avoid the use of artificial channels, levees, and stream diversions; and

• Encourage flood control projects to serve multiple purposes, including maintaining and creating wildlife habitat and habitat connectivity.
# Water Conservation and Management

## Highlights of Current Successes

**Pima County already:**

- Reduces water consumption in County facilities by employing best practices for maintenance and engineering, updating old technologies, and incorporating water-conserving fixtures in new construction and remodeling specifications.
- Uses reclaimed water to irrigate nine County parks and approximately 20 miles of trail along the Rillito River Park.
- Makes use of both stormwater harvesting and County-owned effluent to recharge groundwater, increase riparian habitat, and provide for public recreation.
- Partners with the University of Arizona to evaluate the water-saving benefits of the latest version of irrigation "Smart Controllers" installed at 16 parks.
- Has eliminated acres of non-functional turf at County parks, replacing it with drought-tolerant plants on drip irrigation, pathways and/or decomposed granite.
- Provides training to staff to learn about new technologies for water conservation such as water auditing and water-efficient turf irrigation systems.
- Uses reclaimed water to irrigate landscaped medians along portions of three roadways—Wetmore Road, Ajo Way and River Road.

($) = Requires substantial new funding or resources to implement.
Reducing the Carbon Footprint of County Government

**Sustainability Goal**

- Join communities throughout the world in confronting global climate change by identifying and implementing programs that will reduce the County’s carbon footprint.

**Guiding Principles**

**THE COUNTY WILL:**

- Inventory and monitor greenhouse gas emissions (GHG) as an overarching measure of the County’s progress toward sustainability;

- Seek out the best information and research on new and emerging technologies, financing options, and partnership opportunities that will foster measurable reductions in the County’s GHG emissions and associated carbon footprint; and

- Stay abreast of new developments in the science of global climate change and ways to adapt to, and mitigate, the effects of climate change on the health and quality-of-life of Pima County residents, natural ecosystems, and our economy.

Reduction in the Carbon Footprint of County Government

Facts about CO₂

Every individual, organization, and community has a “carbon footprint,” which is the sum of all of the carbon dioxide emitted as a result of the daily activities of that individual or entity. Most carbon dioxide is generated as a result of the burning of fossil fuels for such things as power plants, transportation, the heating and cooling of buildings, and for industrial activities.

Although carbon dioxide is just one of the greenhouse gases associated with global warming, it is by far the most prevalent. The others are methane, nitrous oxide and fluorinated gases (all are “heat-trapping” gases). The chart below shows the most common sources of carbon dioxide emissions in the U.S.

Success Indicators

1. Reduction in the carbon footprint of County government

   Target:
   • To be determined by Action No. 1, and continually monitored and refined, as necessary

Highlights of Current Successes

Pima County already:

- Spearheaded the first greenhouse gas emissions (GHG) inventory for Pima County in partnership with the Pima Association of Governments (PAG) and the City of Tucson. The following variables are currently being examined to determine the approximate amount of GHG emissions generated by County government operations:
  - electricity and natural gas used by County facilities;
  - vehicle miles traveled by employees commuting to work;
  - vehicle miles traveled by the County’s vehicle fleet (by vehicle and fuel type);
  - electricity consumed by street lights;
  - electricity and natural gas used by County wastewater treatment facilities; and
  - landfill waste generated by County government operations.

- Created a drought response plan and water wasting ordinance that requires water conservation during times of declared drought and also prohibits the wasting of water (County Code Chapter 8.70).

- Establishes measurable targets to increase energy efficiency, reduce water use, develop renewable energy sources, use hybrid and other alternative fuel vehicles, expand employee use of trip reduction programs, build and maintain “greener” buildings, and reduce landfill waste, all of which collectively contribute to lowering GHG emissions and reducing the County’s carbon footprint.
Pima County is committed to creating and maintaining a sustainable community that promotes individual well-being and opportunity, sound resource conservation and stewardship, and a strong and diverse economy for all of its residents.

The breadth and scope of this commitment is reflected in Resolution No. 2007-84, which the Board of Supervisors unanimously adopted on May 1, 2007. Key elements of the resolution are highlighted below.

1. The Pima County Board of Supervisors supports sustainable development and the continual emphasis on sustaining a livable community.

2. The Pima County Board of Supervisors supports implementation of a green building initiative and other sustainable initiatives regarding county facilities and vehicles, including the following goals and aspirations:
   a. Shifting to more environment-friendly alternative fuels for its vehicular fleet such that: 25%, or a minimum of 100 vehicles, of the County’s fleet of vehicles, excluding Sheriff patrol vehicles, shall consist of Alternative Fuel Vehicles by 2008. This percentage shall increase to 30% by 2009 and 50% by 2010.
   b. Applying a green purchasing and waste reduction emphasis to all County facilities.
   c. Maximizing County water resource assets including groundwater rights, surface rights and production and use of effluent to sustain and protect the County’s natural environment.
   d. Reducing water consumption by 15% in all County facilities by 2025. Water reduction strategies will include conducting water audits, replacing high water-use fixtures and replacing high water-use decorative landscaping with drought-tolerant native landscaping.
   e. Doubling the number of County parks served by reclaimed water by 2018, subject to voter approval of bond funds to extend reclaimed water lines.
   f. Designing and building all new occupied County buildings, including additions over 5,000 square feet, for which design is initiated after July 1, 2007, to achieve a minimum of LEED Silver certification level.
   g. Maintaining all LEED certified County facilities under LEED for Existing Buildings and attempting to apply the same standard to all existing facilities.
   h. Applying the above LEED criteria to all projects funded through County bonds as a condition of funding and regardless of jurisdictional project sponsorship.
   i. Designing and constructing at least one medium size County building with a net zero energy consumption.
   j. Adhering to the Renewable Energy Standard adopted by the Arizona Corporation Commission such that 15% of all County facilities electrical energy consumption shall be generated from renewable resources by 2025.
   k. Maximizing renewable energy resources from the production of methane in County wastewater treatment and landfill operations and use them to offset nonrenewable energy needs.

3. Pima County will encourage the construction of new residential, commercial, and industrial facilities employing green building concepts throughout the County by embracing a sustainable development emphasis and by considering:
   a. The creation of incentive based green building residential and commercial programs.
   b. The incorporation of solar systems, solar orientation of structures, solar access, and smart growth principles into County development planning including exploring the possibility of requiring that a minimum of 50% of homes constructed after 2010 include direct solar assisted energy through solar hot water or photovoltaic elements.
   c. The amendment of land use regulations to require that all new houses discharging to septic systems also be provided with a grey water reuse system.
   d. The revision of design and construction standards to capture and mitigate stormwater generated on-site for purposes of water harvesting and the incorporation, into the pavement of parking lots and roads, of light-colored permeable materials to reduce heat-island effects, water runoff, and dust emissions.

Through the implementation of these programs, as well as others undertaken as a result of the Board resolution, Pima County will strive to set an example for other communities desiring to achieve a high quality-of-life for their residents, protect their natural and cultural heritage, and provide meaningful economic opportunities.
Please check all actions your department is responsible for this fiscal quarter.
